# Summer School „Planetary Health“

October 7-16, 2022

in Würzburg, Germany

Climate change is a major global challenge and the biggest threat to health of the century. While geographic differences exist across regions creative solutions can be found in transdisciplinary and transformative collaboration.

The summer school welcomes participants from a wide range of backgrounds to share perspectives from (Eastern) Africa as well as Europe and explore different global as well as local challenges in the context of climate change and other planetary boundaries. By applying a planetary health lens we will identify solutions for mitigation and adaptation relevant in European as well as African contexts.

The summer school offers a mix of educational methodologies and activities inside and outside the classroom with local and international experts, empowering participants to become agents of change and develop their own projects for transformative change.

Dates: **Friday, October 7** (afternoon) – **Sunday, October 16, 2022** (noon)

Participation is free of cost, the number of participants is limited. We reserve the right to make a selection and to raise a cancellation fee of 80 € in case of cancellation after August 31, 2022.
