

Emerging issues in cancer screening

Keynote lecture and Live discussion

When: Wednesday, May 11, 2022, 4:30 – 5:30 p.m.

Where: Lecture hall, Kinderklinik, Universitätsklinikum Würzburg
Josef-Schneider-Str. 2, 97080 Würzburg (site plan on page 2).

In this lecture, Mark Herbert Ebell will discuss emerging issues in cancer screening, including the potential harms of both, under- and overscreening, the harms of overdiagnosis, and how to measure it, and the increasing complexity of recommendations. The presentation will also help us think about how to reimagine cancer screening to maximize the benefit to patients.

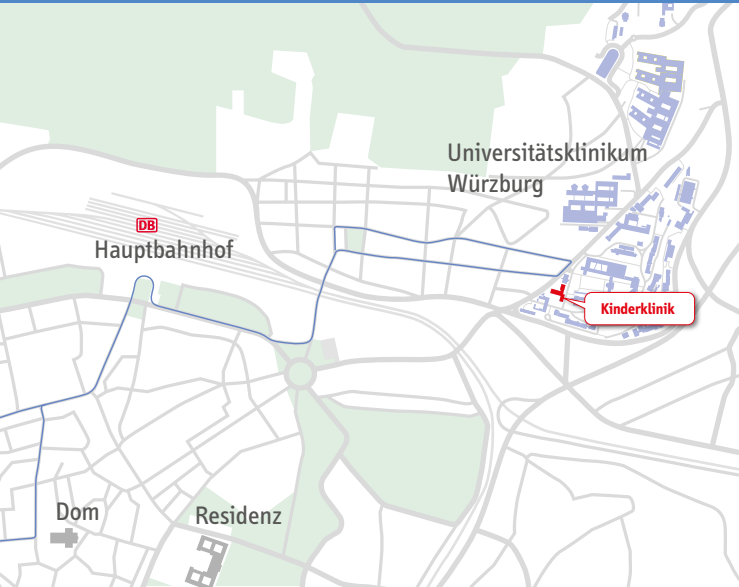

Registration required. [Click here to register to attend in person](#) (Details on COVID-19 regulations to attend in person will be provided upon registration). [Click here to register to the online event](#) (You will receive a link upon registration)

Dr. Mark Herbert Ebell, M.D., M.S., is a family physician and an internationally renowned expert in evidence based medicine and clinical decision-making, former member of the US Preventive Services Task Force. He is a Professor for Epidemiology in the College of Public Health at the University of Georgia, Editor-in-Chief of Essential Evidence Plus, a primary care clinical decision support system, deputy editor of the journal American Family Physician and author of more than 500 international peer-reviewed articles.
